

Biomethane for Transport

An integrated environmental solution

Monday, 3 March 2008
Devonport House, Greenwich, London

A one-day conference hosted by Cenex in partnership with NGVA and EPUK

Biomethane for Transport

An integrated environmental solution

3 March 2008

10.00 - 16.30

Devonport House, Greenwich, London

Biomethane offers an ideal solution to integrate organic waste management with the production of a pure, clean-burning fuel for transport and housing. This conference brings together expertise from biogas producers, transport fleet managers, and a new environmental assessment and project management toolkit.

Waste processing plant

Dual fuel controls

Dual fuel truck

Biogas
refuelling station

Presentations will include:

Implications of the King Review for the UK automotive industry

New developments in the biomethane market - presented by technology providers and HGV fleet managers

The European experience - the case for the use of biomethane as an alternative fuel

Launch of the 'Biomethane Resources Toolkit' - assessment and management of biomethane projects and applications

Low emission strategies for local authorities - from transport to micro-generation of energy

Opportunities for public/private cooperation in the waste management, farming and transport industries

Greenwich
low carbon village

Exhibition opportunities available - please call

Fees:
£80 EPUK and NGVA members
£100 Non-members

For bookings and exhibitors' enquiries, please contact admin@environmental-protection.org.uk, or telephone 01273 878770, or use the separate booking form.
