Industry In
Europe

European
Automobile
Manufacturers
Association

National Implementation

- Compliance deadline 18/10/18
- Not possible to co-ordinate the national implementation of the standard
- Communication to the consumer should be co-ordinated and standardised
- Information must be publicly available in advance of compliance date in recognition of the fact that the labels will be introduced at different stages by different stakeholders

Progress

- Working group is preparing guidance (leaflets) for OEMS & dealers with a separate communication for consumers.
- EC fully briefed on project and delivery timescale.
- Entering a period of consultation with trade association members to finalise text.
- Leaflets will be available from mid February.
- Some newly produced vehicles have EN16942 labels around filler cap and in the owners manual.
- Roll out within forecourts expected during a “transitional period” much closer to October 2018
