

LowCVP – Beyond the Tailpipe: Powering e-Mobility

11th July 2013

Mark J Constable
Senior Product Manager
Electric Transport & Future Heat

EDF Energy

“We bring affordable low-carbon energy solutions home to everyone”

- **Over 50 years of e-Mobility experience within EDF SA**
- **Pan European co-operation between Group companies across France, UK, Switzerland, Austria, Belgium and Italy**
- **Significant R&D investment: battery storage, power line communication, induction charging**
- **A partner in Low Carbon London Smart Grid project**
- **Board Member of the Energy Technologies Institute – incorporating Smart Homes and Electric Vehicles**
- **Partners with the Energy Saving Trust to provide end to end service for Plugged in Fleets (PIFI)**
- **Technical Partner for Induction Charging Trial**
- **Provides Industry/Technical Expertise to BSI, IET,**

Powering e-Mobility © 30 June 2013 EDF Energy plc. All rights Reserved.

20%

We generate around one fifth of the UK's electricity

8

We own 8 nuclear power stations; coal, CCGT & CHP plants, and wind farms

5.8m

We supply Gas and Electricity to 5.8 million business and residential accounts

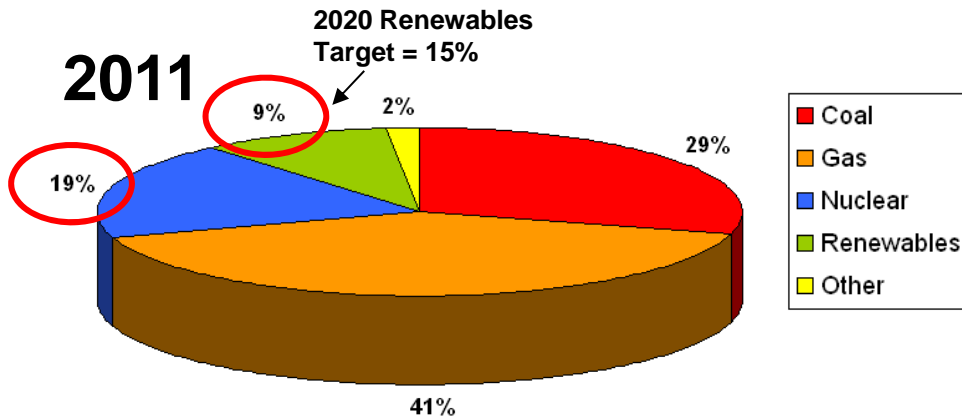

60%

We are reducing the carbon intensity of our legacy electricity generation activities: 60% by 2020

Generation – PIV Opportunity

Country	B2C (€)	B2B (€)
EU27	0.19	0.14
Germany	0.26	0.17
UK	0.17	0.14
EU High	0.30	0.27
EU Low	0.08	0.07

Retail Price Per kWh

Market Driver

- Utilise baseload generation, while achieving a flatter profile (net of wind)
- Energy storage of intermittent generation

Solution

- Charging management
- V2G
- 2nd life battery use
- Hydrogen (excess capacity)

Stakeholders

- EDF Energy, Centrica
- All Generators

Timescales

- Simple solutions deployed in short term in preparation for sophisticated medium to long term solution
- Long term: technology to be developed and high volumes of cars needed

Transmission/Distribution – PIV Opportunity

In Great Britain (broad terms):

- **Transmission: 400/275/132kV grid – owned and operated by National Grid plc**
- **Distribution: 14 network areas, each connected to the grid – owned and operated by 8 companies**
- **Grid can handle EVs - 10% drop in annual UK demand (30 TWh) since 2007**
 - **Equivalent to powering 15m PIVs doing 6000 mpa**
- **Challenges arise in networks due to localised volume: a few PIVs per substation is no problem, every dwelling having one charging simultaneously certainly would be, without Demand Side Management**
- **Drive to understand Smart Grids via projects e.g. Low Carbon Networks Fund**

<u>Market Driver</u>	<u>Solution</u>	<u>Stakeholders</u>	<u>Timescales</u>
<ul style="list-style-type: none"> • Load balancing (National & Local) 	<ul style="list-style-type: none"> • Controlled charging • Smart charging 	<ul style="list-style-type: none"> • National Grid • Distribution Network Operators • Consumers 	<ul style="list-style-type: none"> • Medium term: c. 10 years
<ul style="list-style-type: none"> • Frequency Modulation (keeping to 50hz AC) 	<ul style="list-style-type: none"> • Response Services 	<ul style="list-style-type: none"> • National Grid 	<ul style="list-style-type: none"> • Established service today; requires higher car volumes and intelligent charging

Supply – PIV Opportunity

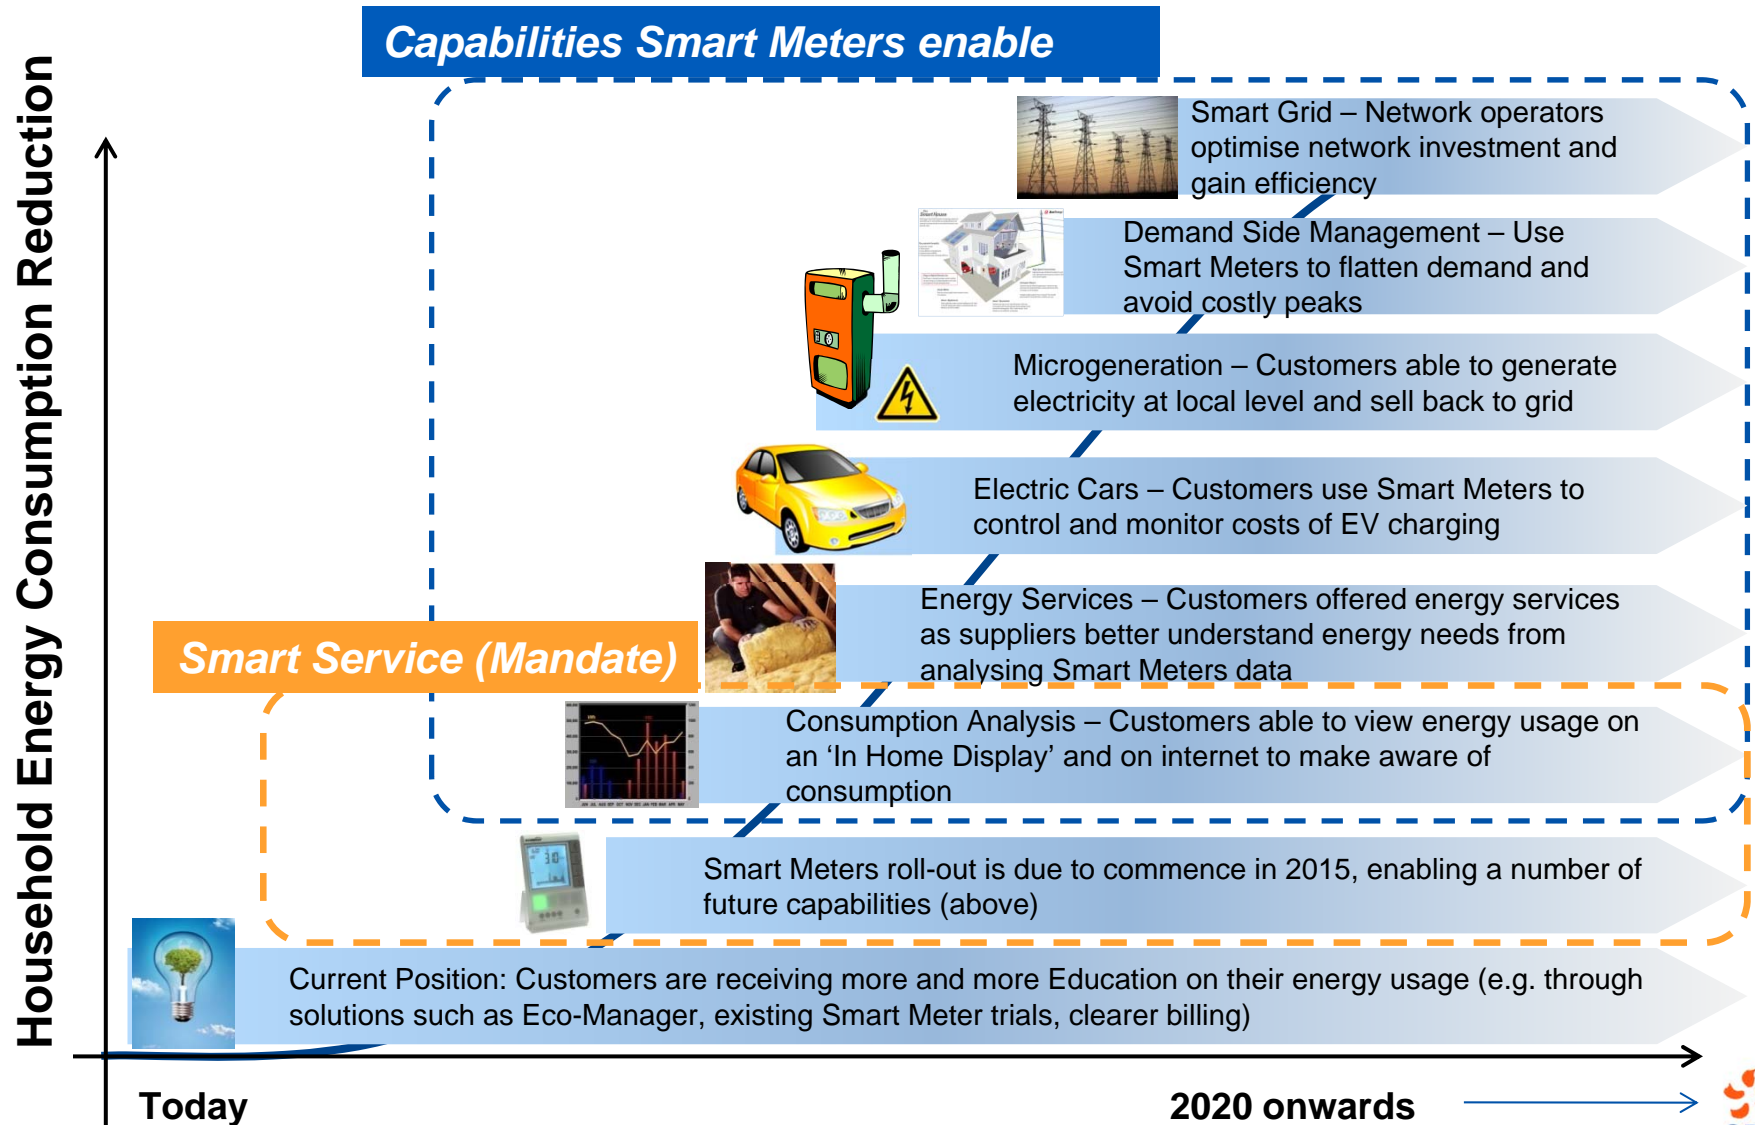

- Competitive supply market: high switch rates (17% - among highest in EU)
- Below EU average prices (15c per kWh)
- Microgeneration market in early phases – clear link being made by both consumers and OEMs between PIVs and Microgen
- Retail Market Review
- Consumer Trust
- Energy Efficiency to be delivered through ECO/Green Deal
- Smart meter mandate to roll out meters to all domestic/SME consumers by end of 2020 (current penetration 4.2%)

							UK Average
Avg CO2 (g/kwh; 2011/2012)	253	330	512	490	519	n/a	430

<u>Market Driver</u>	<u>Solution</u>	<u>Stakeholders</u>	<u>Timescales</u>
<ul style="list-style-type: none"> • Acquire/retain customers • Electrification 	<ul style="list-style-type: none"> • Cost-effective home/work charging • ToU tariffs (RMR?) • Renewables 	<ul style="list-style-type: none"> • Suppliers • Consumers 	<ul style="list-style-type: none"> • Now: taking advantage of current car sales to learn, and then ramp up over time
<ul style="list-style-type: none"> • Smart Future 	<ul style="list-style-type: none"> • /Nuclear • Whole House/Building approaches • Facilitation 	<ul style="list-style-type: none"> • Suppliers • Consumers • National Grid • Distributors 	<ul style="list-style-type: none"> • Smart Meter rollout completes 2020 • Just the beginning...

The Smart Future – Industry Evolution

thank you
